WORK EXPERIENCE

DH Anticounterfeit AB

November 2023 - now

Software Developer-Internship

Halmstad, Sweden

- Developed an Outlook Add-in to simplify our case reporter work flow.
- Work closely with UX Design team for technical feasibility check and contribute design ideas.
- Coding with backend developers to integrate and test backend API.
- Paired with QA and stakeholders to do UAT.
- Built a website for DataHarbor project which is aiming to analyze email content.
- Worked closely with the Data Science team to select an LLM (Large Language Model) to optimize the project's data processing and analysis capabilities.

PROJECTS

Outlook Add-in (React + Typescript + REST API + SOAP API + AWS)

- Developed an Outlook Add-in with React and Typescript, used Axios for communication with backend.
- Implemented Microsoft SOAP API to efficiently process and forward emails.
- Deployed in Virtual Machine in AWS.

DataHarbor (Angular + Typescript + C# + ASP.NET Core Web API + AWS + MongoDB)

- Built a website for AI-driven email analysis with Angular and Typescript.
- Creating an API with .Net Core.
- Using C# for reading notification from S3 bucket in AWS and store data in MongoDB.

Rental Website (React + REST API + EXPRESS + NODEJS + Azure Web App)

<https://vacationnerja.com/>

- Developed a holiday rental website with React, fetching data from Google Calendar API.
- Created an API with Express to send booking request.
- Used Github Actions to deploy in Azure Web App.

Bmeketo Webshop(ASP.NET Core MVC + Entity Framework Core)

<https://github.com/MiaChensSV/Bmeketo>

- Implemented an E-commerce web application with ASP.NET Core MVC that contains features of user login/registration, goods listing, order and shopping cart management
- Create local database with Entity Framework Core.

CERTIFICATE

Microsoft Certified: Azure Fundamentals

202405
